Lost & Found System - Test Cases

Test Case 4: "Claim this item" - Linked Lost Post

Field	Details
Test Case ID	TC-LFS-EP-04
Test Scenario	Verify the claim system successfully initiates when a user links a valid, active lost post to a found item claim.
Preconditions	1. User is logged into the system. 2. User is viewing a 'Found Item' post. 3. User has an active, previously posted 'Lost Item' on their account.
Test Steps	1. Click the "Claim this item" button on the found item page. 2. In the modal/dropdown, select the corresponding active lost item post to link as proof. 3. Click Submit Claim.
Input Data	- Linked Post: Valid Lost Post ID (owned by the claimant)
Expected Result	The claim is submitted successfully with the linked post attached for admin review. A success confirmation is displayed to the user.
Actual Result	(To be completed during test execution)
Status	(Pass / Fail)
Remarks	Validates the valid data partition (correctly associated records) using Equivalence Partitioning (EP) technique.

Test Case 5: Matching - Category Rule

Field	Details
Test Case ID	TC-LFS-EP-05
Test Scenario	Verify the matching algorithm filters out items belonging to completely different categories, ensuring no false positive matches.
Preconditions	1. The database contains a lost item categorized as "Books". 2. The database contains a found item categorized as "Electronics".
Test Steps	1. Trigger the automated matching algorithm for the lost "Books" item. 2. Review the resulting potential matches and their category match scores.
Input Data	- Lost Item Category: "Books" - Found Item Category: "Electronics"

Expected Result	The system returns a 0% category match score between the two items and does not group them together or trigger a match notification.
Actual Result	(To be completed during test execution)
Status	(Pass / Fail)
Remarks	Validates the invalid data partition (mismatched categories) using Equivalence Partitioning (EP) technique.

Test Case 6: Student Directory Search

Field	Details
Test Case ID	TC-LFS-EP-06
Test Scenario	Verify the student directory search handles queries for non-existent users without causing system errors.
Preconditions	1. Admin or authorized user is logged into the system. 2. User navigates to the 'Student Directory' search page.
Test Steps	1. Enter a search query for a student ID or name known not to exist in the database. 2. Click the Search button.
Input Data	- Search Query: "InvalidStudent999"
Expected Result	The system executes the search without crashing and displays a graceful "No student found" message to the user.
Actual Result	(To be completed during test execution)
Status	(Pass / Fail)
Remarks	Validates the invalid data partition (non-existent data) using Equivalence Partitioning (EP) technique.
