Lost & Found System - Test Cases (10-12)

Test Case 10: Trigger activation threshold (60%)

Field	Details
Test Case ID	TC-LFS-BVA-04
Test Scenario	Verify that a match score just below the required threshold does not activate the automated notification trigger.
Preconditions	1. User has posted a lost item. 2. A found item is posted that yields a match score of exactly 59%.
Test Steps	1. Trigger the automated matching process for the newly posted found item. 2. Check the system notification logs or the lost item owner's dashboard.
Input Data	- Match Score: 59%
Expected Result	The trigger remains inactive and no automated match notification is sent to the owner.
Actual Result	(To be completed during test execution)
Status	(Pass / Fail)
Remarks	Validates boundary value just below the exact activation boundary (60%) using Boundary Value Analysis (BVA) technique.

Test Case 11: Date-proximity points in the match score

Field	Details

Test Case ID	TC-LFS-BVA-05
Test Scenario	Verify the proximity point calculation behaves correctly on the exact boundary date where maximum points drop off.
Preconditions	1. A lost item is recorded with Date Lost: Oct 1. 2. A found item matching other criteria is being entered.
Test Steps	1. Enter the found item with Date Found: Oct 2 (exactly 1 day apart). 2. Submit the report and view the resulting match score breakdown.
Input Data	- Lost Date: Oct 1 - Found Date: Oct 2 (1 day apart)
Expected Result	The system awards slightly reduced date proximity points compared to a same-day

	(0 days apart) match.
Actual Result	(To be completed during test execution)
Status	(Pass / Fail)
Remarks	Validates boundary value just above the boundary for a perfect proximity score using Boundary Value Analysis (BVA) technique.

Test Case 12: Match badge colour tiers

Field	Details
Test Case ID	TC-LFS-BVA-06
Test Scenario	Verify the system assigns the correct badge colour right at the minimum threshold for a specific tier (e.g., Gold badge starting at exactly 80%).

Preconditions	1. The matching engine is configured to award a 'High Match' Gold badge at >= 80%. 2. Test items are prepared to generate exactly an 80% match.
Test Steps	1. Process the match between the designated test items. 2. View the resulting match details on the user dashboard.
Input Data	- Match Score: 80%
Expected Result	The system correctly assigns the Gold badge (rather than a lower tier Silver badge).
Actual Result	(To be completed during test execution)
Status	(Pass / Fail)
Remarks	Validates the exact boundary value for the tier transition using Boundary Value Analysis (BVA) technique.
